Priority number(s): JP19790101276 19790810

[Report a data error here](#)**Abstract of JP56027468**

PURPOSE: To lighten a burden on an operator and also to eliminate a miss by providing an equipment with a function of judging whether a sold commodity should not be discounted.

CONSTITUTION: When a discount sale is indicated with the function key, a commodity code input by keyboard 26 is checked by comparison part 23 that makes a successive comparison with the previously set contents of memory area 21 for items except ones on a discount sale. As a result, when the commodity is judged discount one, discount calculation part 24 attains access to its discount rate in discount memory area 27 to calculate its discount amount, which is sequentially summed up in terminal memory 25 by arithmetic part 30. When the corresponding commodity code is in area 21, on the other hand, calculation part 24 performs no discount calculation and the fixed amount is added to the amount claimed in memory 25. At the end of sales, the amount claimed in memory 25 is shown to the customer for a demand for payment with the sale total key depressed.
